Protect Your Cable Investment

New Packaging with New Benefits

Remee has engineered new packaging to provide you a sturdy carton to protect your cable purchase and facilitate ease of use. These new Remee boxes are among the strongest available in the market today. They are used on all standard and customized Remee cable purchases.

The new benefits include:

1. Prominent display of Remee's new identity.
2. Side-loaded panels feature an interlocking plastic ring which secures the plastic payout cone to the carton, while also strengthening the box.

3. Utilizes Remee's proprietary "pull-box" package design for easy cable payout
 - a. Tangle-free
 - b. Twist-free
 - c. Kink-free
 - d. No reel caddy is needed

4. Carton walls are one of the strongest in the industry! Remee boxes feature a double corrugation wall to provide better structural support than single wall cartons. Fully tested using the Mullen

Test to measure the bursting strength of paperboard, all Remee cartons are rated at 275 lbs./sq. in., which indicates the amount of force required to burst any of the SINGLE CORRUGATED WALLS on the box. However, since Remee uses a double-wall corrugation design, this strength factor is ESSENTIALLY DOUBLED. Remee cartons can also hold up to 100 lbs. before experiencing any fatigue.

5. Carton is designed with structural integrity in mind!
 - a. Handles are in front, not on top, which helps keep the glued seams intact.
 - b. Less glue is used – Remee’s exclusive interlocking package design has fewer glued seams required, thereby minimizing the potential points of failure from standard handling and use.

CONSTRUCTION DETAIL

Corrugated material is provided in different wall thicknesses, known as flute sizes. Each flute size has a particularly useful function, from shipping strength, to reducing storage space, to improved printability. Here are the strengths and advantages of the E and B flutes that combine to deliver exceptional structural support for Remee cartons:

E Flute - contains about 90 flutes per foot. The E-flute has greater crush resistance. The thin board profile of the E-flute reduces outer box dimensions and can help save storage space.

B Flute - With lower arch heights and more flutes per foot than A-flute material, B-flutes have a greater number of contact points along the liner. This extra support offers excellent puncture- and crush-resistance properties and consumes less warehouse space.

Remee's exclusive 275# double wall design is totally unique and makes Remee packaging one of the strongest used in the wire and cable industry.

Remee Cable Carton Types

New Remee cartons feature Kraft paperboard and blue ink. Full color labels identify part number information and company logo. Two sizes are available for use:

1. B70
2. B72

Carton Number	Inside Dimensions (Inches)
B70	12 $\frac{3}{4}$ L x 9 $\frac{1}{2}$ W x 12 $\frac{3}{4}$ H
B72	14 $\frac{3}{4}$ L x 9 $\frac{1}{2}$ W x 14 $\frac{3}{4}$ H
